Problem 1: Count Significant Digits

```cpp
#include <iostream>
using namespace std;

int main() {
    string num;
    cin >> num;

    int count = 0;
    bool start = false;

    for (char c : num) {
        if (c == '.')
            continue;

        if (c == '0' && !start)
            continue;

        start = true;
        count++;
    }

    cout << count;

    return 0;
}
```

Problem 2: Round Half to Even (Banker's Rounding)

```cpp
#include <iostream>
#include <cmath>
using namespace std;

int main() {
    double num;
    int n;

    cin >> num >> n;

    double p = pow(10, n);
    num = num * p;

    int x = (int)num;
    double r = num - x;

    if (r > 0.5)
        x++;

    else if (r == 0.5 && x % 2 != 0)
        x++;

    num = x / p;

    cout << fixed;
    cout.precision(n);
    cout << num;

    return 0;
}
```
